Patients with impending airway compromise require the immediate establishment of a definitive airway. Those with less severe findings need early medical management with intravenous (IV) antihistamines, steroids, and subcutaneous epinephrine. 2 After discontinuation of the ACE inhibitor and administration of the appropriate medications, most cases of ACE inhibitor-induced angioedema resolve ...

Airway, Breathing, Circulation | Anesthesia Key

Angioedema induced by the use of angiotensin converting enzyme (ACE) inhibitors is an uncommon but life-threatening complication, especially when the airway is affected, creating unexpected difficult airway management.. A prompt differential diagnosis with anaphylactic shock is critical, given that adrenaline treatment does not improve angioedema.
