DAC. 12.15 A bias generator is required to generate 16 steps from 0 to 100 μA to bias an amplifier. Design a CMOS DAC to do this, assuming the presence of a 50 μA reference current.

12.16 Differential circuits provide good noise immunity and have the advantage of dual rail inputs and outputs.

This book conveys an understanding of CMOS technology, circuit design, layout, and system design sufficient to the designer. The book deals with the technology down to the layout level of detail, thereby providing a bridge from a circuit to a form that may be fabricated. The early chapters provide a
