### Do I need to convert my home battery to charge my EV?

Most home-brew electric cars using DC motors use the reverse gear built into the manual transmission. AC motors with advanced controllers simply run the motor in reverse and need a simple switch that sends a reverse signal to the controller. Depending on the conversion, you may need to install some sort of reverse switch and wire to the controller.

### EV FAQs | Baltimore Gas and Electric Company

If you're buying an EV, make sure the power outlet or wall-mounted charging station will be located within close proximity to your vehicle's connecting port. Charger cables usually run from around 15 to 25 feet in length, but that may not be sufficient or desirable if the car's port is located on the opposite end of the garage from the available power source.
