1.2.1 How to create a table The basic tools that L A TEX offers to create tables and matrices are the tabular, tabular*, and array environments. The environment array can be used only in math mode; all these three environments generate a minipage. The syntax is \begin{array}[pos]{cols} rows \end{array} \begin{tabular}[pos]{cols} rows \end{tabular}

Tables in LaTeX: packages and methods
Generating a table of contents can be done with a few simple commands. LaTeX will use the section headings to create the table of contents and there are commands to create a list of figures and a list of tables as well. I will give a small example code to create a table of contents first:

Generate a table of contents in LaTeX
Texttable, being more lightweight than tabulate, offers no such solution. However, as a personal side project, I put together my first Python library that acts as a wrapper around texttable to create Latex tables. I creatively called it latextable, and it's currently available on PyPi. It provides a similar output to the tabulate Latex format, as well as providing extra functionality such as matching the formatting of the texttable console output and allowing the user to add table captions ...

How to create Latex tables directly from Python code | by ...
