Electrical equipment handbook troubleshooting and maintenance

CURRENT AND RESISTANCE The electric current i is established in a conductor when a net charge q passes through it in time t . Thus, the current is $i = \frac{q}{t}$. The units for the parameters are i : amperes (A) q : coulombs (C) t : seconds (s) The electric field exerts a force on the electrons to move them through the conductor. A positive charge moving in one direction has the same effect as a negative charge ...
