Unlike Project Gutenberg, which gives all books equal billing, books on Amazon Cheap Reads are organized by rating to help the cream rise to the surface. However, five stars aren't necessarily a guarantee of quality; many books only have one or two reviews, and some authors are known to rope in friends and family to leave positive feedback.

Wikipedia says, rather pithily, that “differential topology is the field dealing with differentiable functions on differentiable manifolds.” On the other hand, Wikipedia also says that “differential geometry is [the] discipline using the techniques of differential and integral calculus, as well as linear and multilinear algebra, to study problems in geometry.”

Geometry - Wikipedia

In mathematics, homology is a general way of associating a sequence of algebraic objects, such as abelian groups or modules, to other mathematical objects such as topological spaces. Homology groups were originally defined in algebraic topology. Similar constructions are available in a wide variety of other contexts, such as abstract algebra, groups, Lie algebras, Galois theory, and algebraic ...
