Information Technology Auditing Assurance 3rd

An information technology audit, or information systems audit, is an examination of the management controls within an Information technology (IT) infrastructure and business applications. The evaluation of evidence obtained determines if the information systems are safeguarding assets, maintaining data integrity, and operating effectively to achieve the organization's goals or objectives.

Information technology audit - Wikipedia

Information assurance (IA) is the practice of assuring information and managing risks related to the use, processing, storage, and transmission of information. Information assurance includes protection of the integrity, availability, authenticity, non-repudiation and confidentiality of user data. IA encompasses not only digital protections but also physical techniques.

It may be possible to use technology to automate the information practice audit process to some extent. For example, systems might be developed to systematically reveal decoy data to Web sites and monitor the propagation of that data. Further work is needed to develop techniques for automating the information practice auditing process.
