Mercury Outboard Forum for Mercury Outboard problems

The trim sensor lets the engine know where the engine is located in the trim range. It does this by a pin that spins a knob on the sensor as the engine trims up. If this sensor fails and falsely tells the computer that the engine is trimmed all the way up, it will limit the RPM's of the engine, so it won't go over 4100 RPMs.

Mercury Verado Problems: What You Need To Know About ...

The system will limit the engine speed to within the allowable range. Engine overspeed indicates a condition that should be corrected. Overspeed could be caused by incorrect propeller pitch, engine height, trim angle, etc. Sensor out of Range. Continuous. Engine Guardian System is activated. Power will be limited. Intermittent Beep
