Histology is the microscopic counterpart to gross anatomy, which looks at larger structures visible without a microscope. Although one may divide microscopic anatomy into organology, the study of organs, histology, the study of tissues, and cytology, the study of cells, modern usage places these topics under the field of histology.

Anatomy and histology phenotyping (pathology) is elemental to this ambitious endeavor. It is hoped that comparative atlases such as this will become essential tools for investigators conducting and reporting robust, reproducible, and relevant translational science, thus emulating Virchow and Osler in their recognition of the enduring relevance of comparative medicine and pathology.
